About the Google APIs Client Library for C++

The Google APIs Client Library for C++ provides access to [many Google APIs](#). It is designed for C++ client-application developers wanting to interact with services running on the [Google Cloud Platform](#). It can be used at different levels of abstraction making it suitable to use for talking over HTTP to other service providers as well.

The Google APIs Client Library for C++ is packaged as a software development kit (SDK) with several types of parts:

- Open Source native C++ libraries that provide a foundation for interacting with standard HTTP servers such as those used by the Google Cloud Platform.
- A code generator that produces custom C++ APIs for individual service APIs. These include all [Google APIs](#) as well as [Google Cloud Endpoints](#).
- Code samples and documentation to help you make the most of it.

Click the [Get Started](#) button for instructions on installation and basic use.

See the navigation sidebar for a list of guides, references, and other information.

For other Google APIs Client Library language options, see the Google APIs Discovery Service page listing [Google APIs Client Libraries](#).

Stuck? Try the [Google APIs Client Library for C++ Google Group](#) or email the group at google-api-cpp-client@googlegroups.com.
